

Model 6030-15 Homerunner II Enclosure

Description

The TDI Model 6030-15 is a weather resistant enclosure holding either one or two 6020-15 Homerunner Blocks. It can be ordered in either configuration and is field upgradeable if you want to add a second block later. In addition, this unit can house a combination of one Homerunner and 1 or two standard station protectors.

Features

- Color coded screw terminals
- Each screw will accommodate up to three wires
- Molded from tough 94V-0 ABS
- Second 6020-15 may be added to a single pair unit
- Simple to install
- Packaged in cartons of 10 units

6030-1-U

6030-1-U-T1

Installation

The 6030-15 unit attaches to a wall or beam at a outside or interior location. Attach one wire from the incoming line pair to either the red or green terminals. Attach all home run wires to the appropriate side of the terminal block. If additional terminals are required, or you want to tie down a second incoming pair, simply add a second 6020-15 and either use it as a stand alone, or jumper it to the first block.

Please contact TDI for details.
