### Homerunner II

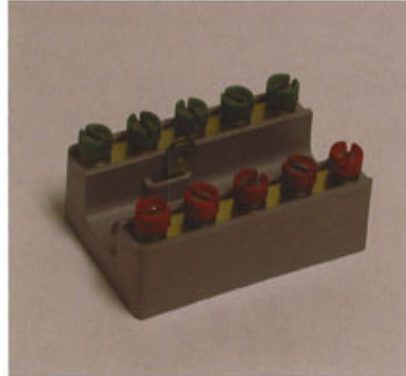

#### Model 6020-15

---

#### Description

---

The TDI model 6020-15 is a multi-pair connection block which allows as many as fifteen home runs to be connected to a single incoming wire pair. These units can be used individually, in tandem using the supplied brass jumpers, or in multiples for completing home runs to more than one access line.

#### Features

---

- Color coded screw terminals
- Each screw will accommodate up to three wires
- Molded from tough 94V-0 ABS
- Easily connected in multiples for high pair count termination
- Simple to install
- Packaged in cartons of 10 units

#### Installation

---

The 6020-15 attaches to a wall or beam at a protected interior location. Attach one wire from the incoming line pair to either the red or green terminals. Attach all home run wires to the appropriate side of the terminal block. If additional screws are required, remove the red and green screws from the end of two blocks and use the supplied brass jumpers to join two blocks together. The 6020-15 can also be supplied in a weather resistant enclosure for exterior use. Please contact TDI for details.
